## Jetty Extension Pier 'E' Dover

Client:  
**Dover Harbour Board**

Main contractor:  
**Herbosch-Kiere Marine Constructors. Ltd.**

Location:  
**Port of Dover**

Date:  
**October 2010 - November 2010**

## Case study

Herbosch-Kiere Marine Constructors was awarded for the 35m extension to the Dover ports Pier E. The extension is to cater for larger ferries that are expected to enter into service in 2011. The works consist of installing a 4m diameter x 46m long fendered monopile and a concrete deck suspended on 6 steel monopiles 1,2m diameter.

The job for the 4m monopile was carried out with the PBA936. The 6 smaller monopiles were executed with the PBA815 using a drill-bit of 1100mm diameter. Both PBA's are hydraulically driven by a powerpack and works with the reversed airlift drilling principle for soil removal.
