## Main brine intake pumping station Jordan

Client:  
**Arab Potash Company Ltd**

Main contractor:  
**Tarticlar**

Location:  
**Jordan**

Date:  
**August 2009 - February 2010**

### Case study

Arab Potash Company has opened a new potash plant at its existing factory in Ghor El-Safi, Jordan. A new pumping station was constructed on a jetty head to support the new facility. DDC has provided the top drilling rig to remove the soil from the 61m long foundation piles. The job was carried out with the PBA306 using a drillbitt diameter 815mm.

This PBA is hydraulically driven by a powerpack and works with the reversed airlift drilling principle for soil removal. After the job Tarticlar has bought the PBA306 from DDC to run their own on shore and offshore projects.
