## Submarine load out jetty Faslane Scotland

Client:  
**Amec**

Main contractor:  
**Briggs Marine Contractors Ltd**

Location:  
**Faslane Scotland**

Date:  
**March 2008 - June 2008**

### Case study

Briggs Marine have been awarded the contract to supply and install large diameter piles for the viaduct section of the Faslane jetty. Due to the requirement to drill out material DDC as specialist was asked to provide a suitable drill rig. Material had to be drilled out to install concrete plugs and for the longer piles to fully drive to rock head level.

Pile length 33m to 65m and diam. 1120mm 1850mm.

The job was executed with the Wirth PBA810 with drill bit 1110mm diameter and 1845mm diameter. The PBA810 is hydraulically driven by a power pack and works with the reversed airlift drilling principal for soil removal.
