More than 60 years of drilling experience came together

MHN & MHNRD Platform project

Client:
Larsen & Toubro

Main contractor:
Oil and Natural Gas Corporated Ltd.

Location:
Arabian Sea west of Mumbai; India

Date:
Nov. 2010 - May 2011

Case study

Mumbai High is an offshore oilfield located in the Arabian Sea around 160km west of the Mumbai coast operated by Oil and Natural Gas Corporation (ONGC). L&T secured a contract from ONGC including an order for MHN processing platform and living quarter projects along with additional order for the supply of three process gas compression modules to be installed in MHN complex.

Having a PBA818 with 200meter length drill string and 5 different diameters as a contingency back up plan for driving refusal. We provided method statements and procedures, delivered the complete set up and had personnel on standby in case of refusal. By taking the responsibility of the complete drilling operations DDC created a situation for its client in which they could focus on their main job and making it a successful project.
