## PY-1 Gas field develop- ment project

Client:

**Cal Dive Marine Construction Ltd.**

Main contractor:

**Hindustan Oil Exploration Comp. Ltd.**

Location:

**Bay of Bengal near Chennai; India**

Date:

**January 2009 - April 2009**

## Case study

PY-1 Gas field is the southernmost of the four sedimentary basins located along the eastern margin of India. It is bounded in the south by the Sri-lanka basement massif and in the north and west by the Indian Craton. The job consisted Transportation & Installation (T&I) of the PY-1 Sun Wellhead Platform.

The PBA810 with 180 meter drill string with a 1240mm diameter Bottom Hole Assembly was on board as a contingency for the pile driving, for soil plug removal. If the piles could not be driven to the required depth drilling will be required to reduce friction to reach finale penetration with hammering.
