Date:
June 2005 - July 2005

Case study

The local BUNDUQ OIL CO. awarded a construction contract for an offshore process platform to India-based LARSEN & TOUBRO (L&T). According to the terms of the award, L&T will be responsible for the provision of engineering, procurement and construction (EPC) services.

The scope of the project included the installation of: - a new platform jacket; - a deck; - a bridge that links the deck with existing gas sweetening facilities; - Unspecified associated works.

DDC acted as clients representative for the installation and grouting of the insert piles and executing of all drilling operations. The job was executed with the Wirth PBA612 using reversed airlift drilling.
