Lincs Offshore Wind Farm

Client:
Centrica Renewable Energy Ltd.

Main contractor:
MTHøjgaard A/S

Location:
Skegness Lincolnshire UK.

Date:
April 2011 - October 2011

Case study

Leading British energy company Centrica has begun offshore works for its 270MW Lincs Offshore Windfarm, 8km off the Lincolnshire coastline east of Skegness. Main contractor MTHøjgaard will install 75 monopiles with diameter of 4900 mm. The foundations will be installed from the MPI Resolution.

Due to the conical top of the foundation the drill rig has retractable arms.

This job will be executed with the PBA 936 with a drill

bit capable of drilling at 4900mm. This PBA 936 is hydraulically driven by a Power pack and works with the reverse air lift drilling principal.
