Offshore Wind Farm Baltic 1

Client:
Energy Baden-Württemberg

Main contractor:
Ballast Nedam

Location:
Baltic Sea

Date:
April 2010 - July 2010

Case study

Baltic 1 Offshore Windfarm is the first commercial offshore windfarm of Germany. It is located 16 km offshore Germans Baltic Coast . Ballast Nedam as subcontractor has designed, supplied and installed the 21 foundations using the jack-up barge the Sea Worker.

In case of early refusal drilling techniques of DDC were used to allow the pile to be driven to the final depth.

The job was executed with the Wirth PBA 936 off DDC using a drill-bit of 4000 mm diameter.

This PBA 936 is hydraulically driven by a Power pack and works with the reverse air lift drilling principal.
